Summary

Mobile App Developer with professional experience in building scalable cross-platform applications using Flutter, Dart, REST APIs, Firebase, and Supabase. Worked on healthcare and business applications, including MediTrack and AI-powered healthcare solutions. Experienced in mobile app architecture, API integration, authentication systems, and performance optimization. Additionally, gained exposure to AWS and CI/CD practices through DevOps experience.

Publication

March 2026 Electrocardiogram (ECG) Arrhythmia Classification

DOI: https://doi.org/10.3390/technologies14030148

- Developed a self-supervised ECG representation learning framework using contrastive pretraining and a hybrid ensemble of convolutional and tree-based models for multiclass arrhythmia classification.
- Evaluated the framework using patient-level cross-validation and independent ECG cohorts including PTB-XL, Chapman–Shaoxing, and INCART.
- Achieved macro-F1 scores of 0.91–0.94 on external datasets, demonstrating robust performance across heterogeneous patient populations and recording configurations.
- Applied SHAP and Grad-CAM to support model interpretability.

Experience

June 2026-October 2026 **Glixen Technologies, Lahore**

- Maintained and customized the AdForest Flutter marketplace application to meet client requirements, enhancing existing features and implementing new functionality.
- Managing and troubleshooting the server, WordPress backend, and REST API connectivity.
- Implemented marketplace features, including Buy Now checkout, offer creation and acceptance, buyer–seller communication, and order management.
- Developed order tracking workflows with courier details, shipment status updates, delivery confirmation, and payment handling.
- Worked on Live Selling features, including live session management, embedded video streaming, product highlighting, live chat, viewer tracking, and session analytics.
- Integrated wallet balance management, commission tracking, payout requests, and pending and released payment views.
- Implemented seller ad settings, product-size selection, social sharing, app navigation, and Firebase Cloud Messaging notifications.
- Debugged API integration issues, improved response parsing and error handling, and tested application workflows using Postman and Android devices.
- Integrated and maintained third-party services, including Firebase Authentication, Phone verification number, Google and Facebook Sign-In, and payment-related features.
- Converted old React Native CLI projects to expo.
- Testing application functionality, debugging API responses, and ensuring stable performance across mobile devices.

December 2025-May 2026 **Shaukat Khanum, Lahore**

- I worked in Mobile App Development using flutter language.
- Built a MediTrack application for both doctors and patients' healthcare.
- Built a clone app of Chughtai Lab using MVC architecture, and GetX Management.
- Implement API in Python using Flask API to integrate into flutter dio API service.
- Implemented global card payment using Stripe.
- Testing manually widgets, validation and authentication form and APIs using postman.

July 2025-October 2025 **Internship at TxLabz, Lahore**

- Gained hands on experience in AWS Cloud Provider, CI/CD pipelines, and Deployment in staging and in production level.
- Build the prototype of code-metrics and store it in database.
- Send prototype summary in slack via webhook and visualize in Grafana.

August 2023-September 2023 **Internship at TxLabz, Lahore**

- Completed 6 weeks internship in Mobile App Development using flutter language.
- Built a Basic Calculator and BMI Calculator apps.
- Designed the HBL-like integrated Firebase for user data management.

Academic Profile

September 2020-January 2025 **Bahria University Lahore**

Final Year Project – Diabetic Foot Ulcer Detection and Classification:

- Developed a Python-based AI system to analyze and classify diabetic foot ulcer images using advanced deep learning techniques.
- Applied preprocessing techniques such as normalization, resizing, data augmentation, and SMOTE to enhance dataset quality and balance classes.
- Utilized EfficientNetB0 model classification, feature extraction to achieve high accuracy
- Deployed the solution within a flutter-based mobile application to provide healthcare professionals with decision support.

Projects

2026 MediTrack Mobile Application:

- Role-based dashboards (Patient/Doctor) with Google OAuth authentication using Supabase.
- Real-time health record management with medical insights.
- Prescription system with file upload.
- Multi-member family history tracking.
- Doctors can track all the records of patients from their dashboard.
- Integrate push notification via firebase and chat conversation of doctor and patient.

2025 E-commerce Mobile App Development:

- Design e-commerce application architecture using flutter language where users can purchase products from different brands.
- Implemented user authentication using firebase.
- Built core shopping features include product listing, product details, cart management, wish list, and checkout flow, and reuseable components.

2024 Final Year Project – Diabetic Foot Ulcer Detection and Classification:

- Implemented a Python-based AI model to analyze and classify diabetic foot ulcer images using advanced deep learning techniques.
- Preprocessed the image dataset, applying normalization, resizing, data augmentation, and SMOTE for balancing classes.
- Implemented EfficientNetB0 model classification and feature extraction to achieve accuracy.
- Deployed the model in a Flutter-based mobile application to assist healthcare providers.

Distinction

- Hafiz-e-Quran at the age of 12 years

Core Skills

Platform/Tools:

- Visual Studio Code
- GitHub
- Firebase
- AWS
- Postman
- Supabase

Languages/Framework

- SQLite
- Flutter
- Dart
